July 2011

ABSTRACT OF THE PROJECT PROPOSAL

Project Number : KFRI 443/ 2004

Title : Strengthening and Computerization of KFRI Herbarium

Objectives : To computerize the herbarium with about 2000 plant species along with their data sheets.
: To develop a search facility so that data and images can easily be retrieved.

Date of commencement : April 2004

Date of completion : July 2011

Funding agency : KFRI Plan Grants

Investigators : K. Yesodharan
K. K. Nair

ABSTRACT

Computerization of KFRI Herbarium was undertaken to digitize the information about the herbarium specimens in such a way that it is easily accessible with the help of internet and world wide web (www) throughout the world. Modern databases also include the actual herbarium specimens as digital images with all accompanying information available on the herbarium sheet label. The digital database of the herbarium specimens was developed by selecting 33 variable characters by using software package “DELTA”. The digital photos were attached to the database after feeding the characters. Nearly 1891 species belonging to 96 families of dicots and monocots have been incorporated in the digital herbarium till now. These contain rare, endangered and endemic plant specimens including type specimens. Digital herbarium database has some edge over traditional one as the herbarium will not have any pathogenic attack, no bio-degradation problems, no space problem, minimum maintenance cost etc. In addition, this database can be used for information retrieval, generation of conventional key and interactive key, and to get full description, brief description and diagnostic features of plants, current status of the plants, socio-economic values, etc.

ACKNOWLEDGEMENTS

We wish to express our deep sense of gratitude to Dr. J.K. Sharma, and Dr. R. Gnanaharan former Directors, Dr. K.V. Sankaran, Director, Kerala Forest Research Institute, Peechi for their constant encouragement, facilities and personal interest in implementing the project. We are grateful to Mr. Ajikumar, A.G., Ms. Runcy, V.J., Rashmi and Mr. Sebastian. K., for their technical assistance in the project. We are also thankful to Kerala State Council for Science, Technology and Environment, Thiruvananthapuram for financial assistance.

INTRODUCTION

Over the last 35 years, KFRI has gained ample scientific expertise and built up necessary infrastructural facilities to undertake problem solving academic and applied research for meeting the needs of the forestry sector of the State. Correct identity of plants is central to basic as well as applied forestry research. For authentic identification of plants, consultation of taxonomic literature and comparison with voucher specimens are crucial and the role of a herbarium is of paramount importance. Considering this, the institute established a Herbarium in the Botany Division, during 1978. The herbarium of Kerala Forest Research Institute holds more than 22000 specimens of angiosperms belonging to about 2000 species. A herbarium can be defined as a store house of dried and mounted plant specimens, authentically identified and arranged according to an accepted system of classification. The specimens in the herbarium serve as a basic reference material for research in systematic botany and related fields. The herbarium contains valuable information on the identity, habit, habitat, occurrence and phenology of plants. The herbarium permanently represents the floral wealth of the geographical region from where the specimens are collected.

Computerization of Herbarium

There are several limitations in establishing and maintaining a herbarium particularly in preparation, preservation and handling of herbarium sheets in addition to the problems associated with fading of original colours and biodegradation. Nowadays traditional herbarium preparation is becoming outdated in many universities and colleges. No doubt, the traditional method has its own importance, besides its problems. However, a new concept of digital herbarium has emerged to overcome certainly many of the problems associated with the traditional method. Digital herbarium has many facilities and is user-friendly as well as informative.

India is one of the countries in the world with a rich biodiversity of plants and hotspots. To maintain a reference collection of the region or the country is a difficult task. In this regard a digital database of the plant wealth is a handy alternative. The digital database of herbarium specimen is developed by selecting 33 variable characters by using software package 'DELTA'. These characters are

class, family, reference, cabin, pigeon hole, duplicates, accession number.,accession date, collection number, habit, location, habit, biodiversity status, collector, distribution, longevity of plants, floers and fruits, stem, leaves, petiole, stipule, flower, inflorescence, epicalyx, calyx, corolla, stamen, pistil, fruit, seed, local name and uses. The digital photos are attachéd to the database.

Presently, the KFRI herbarium contains nearly 1891 species belonging to different families of dicots and monocots. This includes endemic, rare, endangered and threatened plants of which some are new records to Kerala. Thus the herbarium is a valuable source of reference for forest botanists, forestry specialists and students. In order to maintain this facility and make it available for future generations of visitors for reference, the task of computerization of the herbarium was taken up.

MATERIALS AND METHODS

The herbarium of Kerala Forest Research Institute is arranged according to Bentham and Hooker's System of Classification of flowering plants. Mostly herbarium specimens of plants growing in the forests of Kerala are included in the digital herbarium database preparation. The digital database of herbarium specimens was developed by selecting thirty three variable characters by using software package "DELTA"(Description Language for Taxonomy) developed by Entomology Division of Commonwealth Scientific and Industrial Research Organization (CSIRO), Australia. The herbarium specimens were photographed with digital camera and the images were processed in the computer. The digital photos were uploaded to the database after making entries of taxonomic characters. Nearly 1890 species belonging to 96 families of dicots and monocots were incorporated in the digital database. These include rare, endangered, and endemic plants belonging to Kerala forests.

RESULTS AND DISCUSSION

Herbarium database is being finalized step-by-step for hosting on the web, so that it is easily accessible with the help of Internet and world wide web(www).It is also planned to make the herbarium database available in the form of Compact Discs(CDs).As far as possible the images of most of the herbarium specimens are also attached along with the herbarium database.The list of species covered under the project is given in Appendix 1.

Appendix 1

1. *Anemone rivularis* Buch.-Ham. ex DC.
2. *Clematis gouriana* Roxb. ex DC.
3. *Clematis munroiana* Wight
4. *Naravelia zeylanica* (L.) DC.
5. *Ranunculus reniformis* Wall.ex Wight&Arn.
6. *Ranunculus wallichianus* Wight&Arn.
7. *Thalictrum glyphocarpum* Wight & Arn.
8. *Acotrema arnotianum* Wight
9. *Dillenia bracteata* Wight
10. *Dillenia pentagyna* Roxb.
11. *Tetracera akara* (Burm. f.) Merr.
12. *Michelia champaca* L.
13. *Artobotrys zeylanicus* Hook. f. & Thoms.
14. *Cananga odorata* (Lam.) Hook. f. & Thoms.
15. *Cyathocalyx zeylanica* Champ. ex Hook. f. & Thoms.
16. *Desmos lawii* (Hook.f. & Thoms.) Safford
17. *Goniothalamus cardiopetalus* (Dalz.) Hook. f. & Thoms.

18. *Goniothalamus rhynchantherus* Dunn
19. *Goniothalamus wightii* Hook. f. & Thoms.
20. *Meiogyne pannosa* (Dalz.) Sinclair
21. *Meiogyne ramarowii* (Dunn) Gandhi
22. *Miliusa Montana* Gard. ex Hook.f. & Thoms.
23. *Miliusa tomentosa* (Roxb.) Sinclair
24. *Mitraphora grandiflora* Bedd.
25. *Mitraphora heyneana* (Hook. f. & Thoms.) Thw.
26. *Orophea erythrocarpa* Bedd.
27. *Orophea malabarica* Sasidh. & Sivar.
28. *Orophea thomsonii* Bedd.
29. *Orophea uniflora* Hook. f. & Thoms.
30. *Popovia beddomeana* Hook. f. & Thoms.
31. *Phaeanthus malabaricus* Bedd.
32. *Sageraea laurifolia* (Graham) Blatt.
33. *Polyalthia coffeoides* (Thw. ex Hook. f. & Thoms.)
Hook. f. & Thoms
34. *Polyalthia fragrans* (Dalz.) Bedd.
35. *Polyalthia longifolia* (Sonner.) Thw.
36. *Uvaria narum* (Dunal) Wall. ex Hook.f. & Thoms.
37. *Uvaria zeylanica* L.
38. *Anamirta cocculus* (L.) Wight & Arn.
39. *Cissampelos pareira* L.
40. *Coscinium fenestratum* (Gaertn.) Colebr.
41. *Cyclea peltata* (Lam.) Hook. f. & Thoms.
42. *Diploclisia glaucescens* (Blume) Diels in Engl.
43. *Stephania japonica* (Thunb.) Miers
44. *Stephania wightii* (Arn.) Dunn in Gamble
45. *Tiliacora acuminata* (Poir.) Miers ex Hook.f. & Thoms.
46. *Tinospora sinensis* (Lour.) Merr.
47. *Berberis chitria*
48. *Mahonia leschinaultii* (Wall. ex Wight & Arn.) Takeda
ex Gamble
49. *Argemone Mexicana* L.

50. *Brassica juncea* (L.) Czern. & Coss. var. *juncea*
51. *Cardamine Africana* L.
52. *Cleome monophylla* L.
53. *Cleome viscosa* L.
54. *Capparis baducca* non L.
55. *Capparis brevispinia* DC.
56. *Capparis moonii* Wight
57. *Capparis sepiaria* L.
58. *Capparis tenera* Dalz.
59. *Capparis zeylanica* L.
60. *Crataeva nurvala* Buch.-Ham.
61. *Viola patrinii* DC.var.*nepalensis* Ging.
62. *Viola serpens* Wall.ex Ging.
63. *Casearia ovata* (Lam.) Willd.
64. *Casearia esculenta* Roxb.
65. *Casearia wynadensis* Bedd.
66. *Flacourtia Montana* Graham
67. *Homalium zeylanicum* (Gard.) Benth.
68. *Hydnocarpus alpina* Wight
69. *Hydnocarpus laurifolia* (Dennst.) Sleum.
70. *Hydnocarpus macrocarpa* (Bedd.) Warb
71. *Scolopia crenata* (Wight & Arn.) Clos
72. *Cochlospermum religiosum* (L.)
73. *Pittosporum neelgherrense* Wight & Arn.
74. *Polygala arillata* Buch.-Ham.
75. *Polygala arvencis* Willd.
76. *Polygala rosmarinifolia* Wight & Arn.
77. *Polygala sibirica* L.
78. *Xanthophyllum flavescens* non Roxb.
79. *Drymaria cordata* (L.) Willd. ex Roem. & Schult. ssp. *diandra* (Blume) Duke
80. *Polycarphaea corymbosa* (L.) Lam.
81. *Polycarpon prostratum* (Forssk.) Asch. & Sehweinf.
82. *Portulaca oleracea* L.

83. *Portulaca pilosa* L. ssp. *pilosa* var. *tuberosa* (Roxb.) Sivar.
84. *Hypericum mysurense* Heyne ex Wight & Arn.
85. *Calophyllum apetalum* Willd.
86. *Calophyllum austroindicum* Kosterm. ex Stevens
87. *Calophyllum calaba* L.
88. *Calophyllum polyanthum* Wall. ex Choisy
89. *Garcinia cowa* Roxb. ex DC
90. *Garcinia gummi-gutta* (L.) Robs.var.*gummi-gutta*
91. *Garcinia Morella* (Gaertn.) Desv.
92. *Garcinia spicata* (Wight & Arn.) Hook. f.
93. *Garcinia talbotii* Raiz. ex Sant.
94. *Garcinia wightii* Anders.
95. *Mesua ferrea* L.
96. *Mesua nagassarium* Kosterm.
97. *Poeciloneuron indicum* Bedd.
98. *Camellia sinensis* (L.) O.Ktze.
99. *Eurya japonica* Thunb.
100. *Gordonia obtusa* Wall.ex Wight & Arn.
101. *Dipterocarpus bourdillonii* Brandis
102. *Dipterocarpus glandulolus*
103. *Dipterocarpus indicus* Bedd.
104. *Dipterocarpus macrocarpus*
105. *Hopea glabra* Wight & Arn.
106. *Hopea parviflora* Bedd.
107. *Hopea ponga* (Dennst.) Mabb.
108. *Hopea wightiana* Wall. ex Wight & Arn.
109. *Shorea affinis*
110. *Shorea congestiflora*
111. *Shorea lissophylla*
112. *Shorea stipularis*
113. *Vateria indica* L.
114. *Vataria macrocarpa* Gupta

115. *Ancistrocladus heyneanus* Wall. ex Graham
116. *Abutilon persicum* (Burm.f.) Merr.
117. *Abelmoschus moschatus* Medik.
118. *Hibiscus furcatus* Roxb.ex DC.
119. *Hibiscus lobatus* (Murr.) O. Ktze.

1872. *Teinostachyum wightii* Bedd.

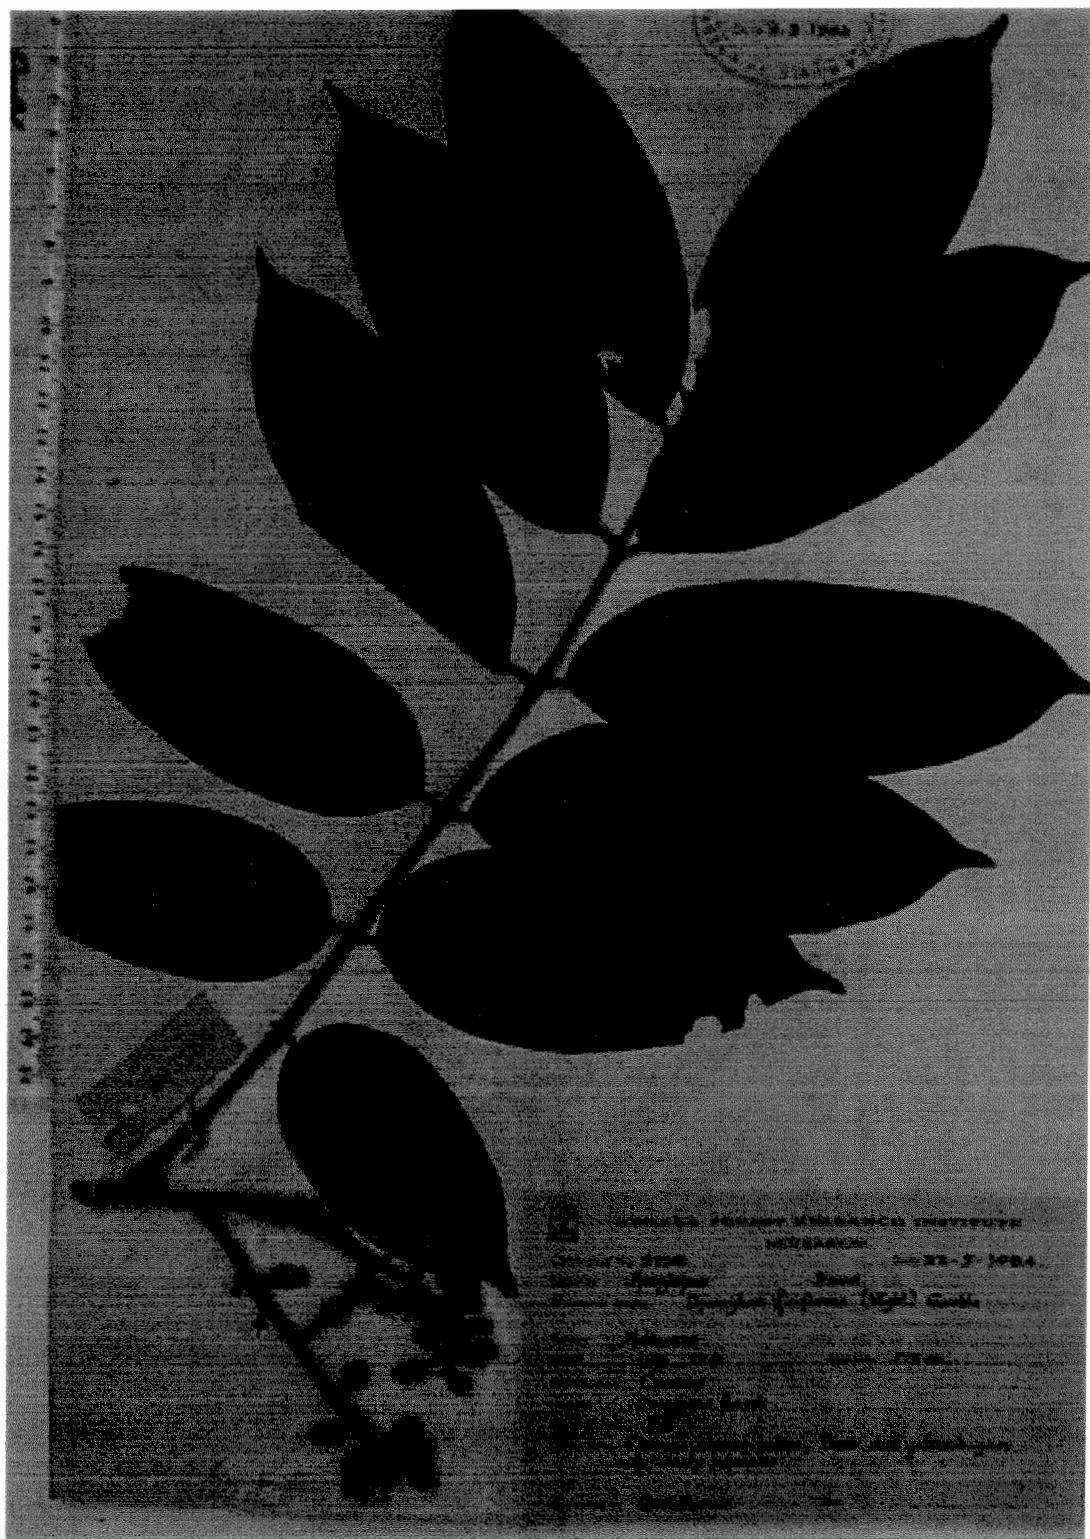

The applications of this herbarium database are many in addition to merits over traditional methods of herbarium and some of them are as follows.

1. Retrieval of individual plant information.
2. Generation of differences between two or more species, which can be used to decide the systematic position of plants and their families.
3. Generation of Key and Intkey (Interactive key) from the digital data.
4. To know the distribution pattern of plants and their present status in general.
5. Socio-economic values of plants etc.

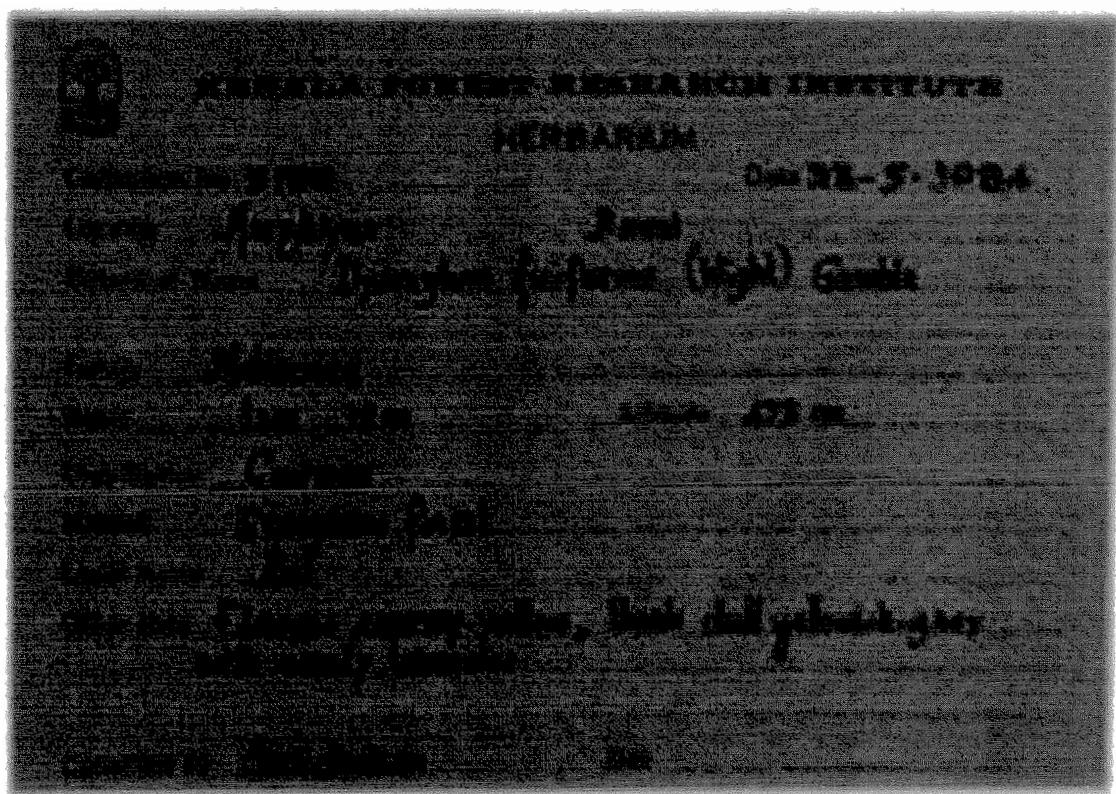

Further, this technique can be adopted not only to angiosperms but also for various plant and animal groups. This database can be updated easily at regular intervals of time. Finally it can be stated that this database may not be alternative to the existing herbarium but certainly complimentary to the existing herbarium. It forms an important centre of data storage system for faster dispersal of information from one place to anywhere in the world.
